DETAILED ACTION

Status of the Application

- [1] Claims 1-54 are pending in the application.

Election/Restriction

[2] Applicant's election without traverse of Group VIII, claims 41-45, in the reply filed on 5/16/08, is acknowledged.

[3] Claims 1-40 and 46-54 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention or subject matter, there being no allowable generic or linking claim.

[4] Upon further consideration, the instant Office action is a supplemental restriction requirement of claims 41-45, deemed necessary by the examiner for reasons set forth below. See MPEP 811.02.

Election of Species

[5] This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1. Applicant is required to elect one of a ligase and one of a substrate as set forth below.

The species of ligase are as follows: 1) Itch and 2) Aip4.

The species of substrate are as follows: A) PLC- γ and B) PKC θ .

[6] The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

According to PCT Rule 13.2 and to the guidelines in Section (f)(i)(B)(1) of Annex B of the PCT Administrative Instructions, species must have a common structure. Although the recited species of ligase or the recited species of substrates share a common property or activity, the ligases or substrates are not regarded as being of similar nature because the alternatives do not share a common structure. Moreover, as noted in the prior Office action and undisputed by applicant, the shared same or corresponding special technical feature is not a contribution over the prior art Berleth et al. (*J Biol Chem* 267:16403-16411, 1992; cited as reference C8 in the IDS filed on 8/15/07), which teaches use of an E3 ubiquitin ligase polypeptide in identifying inhibitors of E3 ubiquitin ligase (see, e.g., p. 16404-16405) and does not make it a contribution over the prior art.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
